Brand	AOICRIE
Maximum Supply Voltage	30 Volts
Minimum Supply Voltage	3.6 Volts
Mounting Type	DIN Rail
Number of Pins	16

About this item

- PC817 8 channel optocoupler isolation board is independent, can control different voltage at then same time.
- 8-way 817 optocoupler driving port signal voltage:3.6-24V; Output voltage range: 3.6-30V(The output current depends on the specific situation but not over 10MA. When the total power is fixed, the voltage and current are inversely proportional).
- PC817 optocoupler module can realize 3.3V or 5V control the interface of 3.6-30V voltage level.After the control terminal is turned on, the controlled terminal will also be turned on.Voltage conversion,and can realize to drive a high level from a low level.
- Photoelectric isolation has strong anti-interference ability, it can drive high power triodes, MOS tubes and

Product Description

PC817 Optocoupler Module can achieve an interface with a voltage level of 3.6-24V controlled by 3.3V or 5V. After the control terminal is connected, the controlled terminal will also be connected. Strong photoelectric isolation and anti-interference ability. Later, it can drive high-power transistors, MOS transistors, and other occasions that require high voltage driving, or directly drive low-power 24V relays to work. If it is a pulse signal, please note that the limit of 817 is below 4KHZ. For control signals greater than 4KHZ, please do not use this module as it will not work properly.

PC817 Parameters:
Driving Port Signal Voltage:3.6-24V

Deliver to Joshua Wayne 48184

Industrial & Scientific

Package include: 2pcs PC817 8 Channel Optocoupler Isolation Board

Note:
The input port is shared with GND;
The output ports are independent of each other;
It is optocoupler output.V and G will be connected after input valid signa in input port.

Top reviews from the United States

- Some guy on the Internet

Works great, maybe not the best circuit for discrete inputs

Reviewed in the United States on June 26, 2025

Verified Purchase

These work great, just realize on the input side, all GND are tied together, with no option to change this. On the output side (connected to your arduino) there is the option to remove the jumper, so each GND is unique, but I'm not sure how that's actually useful.

Amazon Vine Customer Review of Free Product ([What's this?](#))

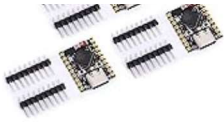

I really wish they'd include even a single-page spec sheet with these things, but it does seem to work as advertised. Handy for isolating inputs.
